

COVID-19

Vivago's safety and wellbeing solution against COVID-19

Effective care and treatment are even more important in crisis situation

Vivago's real-time monitoring of wellbeing, health status and functional capacity enables **preventive measures, automatic alarms and more customer-centric care**. When the COVID-19 virus threatens us, wellbeing monitoring provides proactive information and healthcare professionals can focus care and treatment on those patients who need it the most. The real-time wellbeing information gives more time for care work.

Benefits of Vivago solution in elderly care:

- Preventive and personalised care
- Automatic alarms and notifications of the wellbeing changes
- Follow-up of the effectiveness of care and medication
- Allocation of care resources and evaluation of the need of acute care
- Real-time data can also be shared with relatives

Vivago's safety and wellbeing solution provides a better chance of successful treatment in the fight against the COVID-19

The Vivago solution includes a unique Vivago CARE watch. With the watch it is easy for the patient to call for help just by pressing a button. In addition, with real-time wellbeing information nursing staff receive automatic alarms and notifications about changes in wellbeing and functional capacity.

COVID-19 often causes patients severe respiratory symptoms, as well as a change in the patient's general condition. The real-time wellbeing information can be used to clearly identify patients whose general condition has undergone a change that requires urgent action.

Vivago

Take advantage of Vivago's unique added value

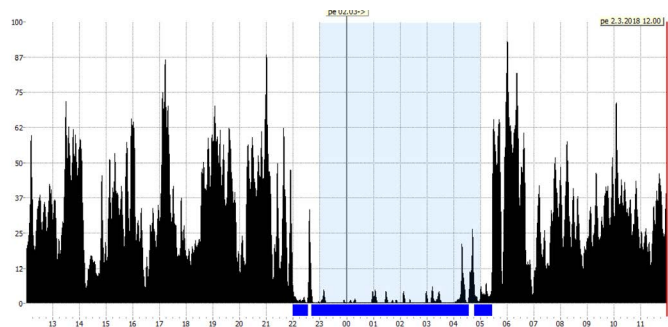

Vivago solution automatically notifies healthcare professionals when there is a change in the customer's wellbeing. Especially in exceptional circumstances, it is necessary to react to the change and find out the reason for the change.

It may be that Corona virus, which has escalated into an epidemic, causes a change in the patient's ability to function and the necessary measures and appropriate treatment must be started immediately.

Better care for the patient with real-time wellbeing measurement

The Vivago solution informs healthcare professionals whether the change in the customer's wellbeing is slow or fast. These rapid changes are reflected in the software as a red attention colour for the customer. Rapid change is the most important thing to look at carefully, especially now in exceptional circumstances. A slow change in wellbeing (yellow attention colour) indicates a longer-term change, the origin of which is also important to find out.

By utilizing the wellbeing data of the Vivago solution, it is possible to anticipate the situation, see the wellbeing status of the customer and work more systematically.
